# WHAT I LEARNED

I was very excited to be creating a project based on the 80's! I am a huge fan of 80's music and really anything from that decade.

This was my first project and I really enjoyed the whole process from competitive analysis, creating low-fidelity wireframes, designing a mood board and finally putting it all together in my final wireframes.

Overall, I was very happy with my first project. Looking back I would definitely iterate more on my screens and perform more user testing and preference testing.
